

Project: AWS Cloud Server Deployment

Deployed a production-ready Ubuntu cloud server on AWS. Configured VPC, subnet, internet gateway, routing, and security groups. Connected via SSH and installed web server to host a live page. Demonstrated real-world cloud infrastructure deployment and secure networking setup.

EC2 Instance running

The screenshot displays the AWS Management Console interface for the EC2 Instances page. The left sidebar shows the navigation menu with options like Dashboard, AWS Global View, Events, Instances, Images, Elastic Block Store, Network & Security, Load Balancing, and Auto Scaling. The main content area shows a list of instances. The instance 'demoec2' (i-023db4c2d6457973b) is highlighted, showing it is in a 'Running' state. Below the list, the 'Details' tab for instance 'i-023db4c2d6457973b (demoec2)' is selected, displaying the instance summary with the public IPv4 address 51.20.91.70 and private IPv4 address 10.0.1.185.

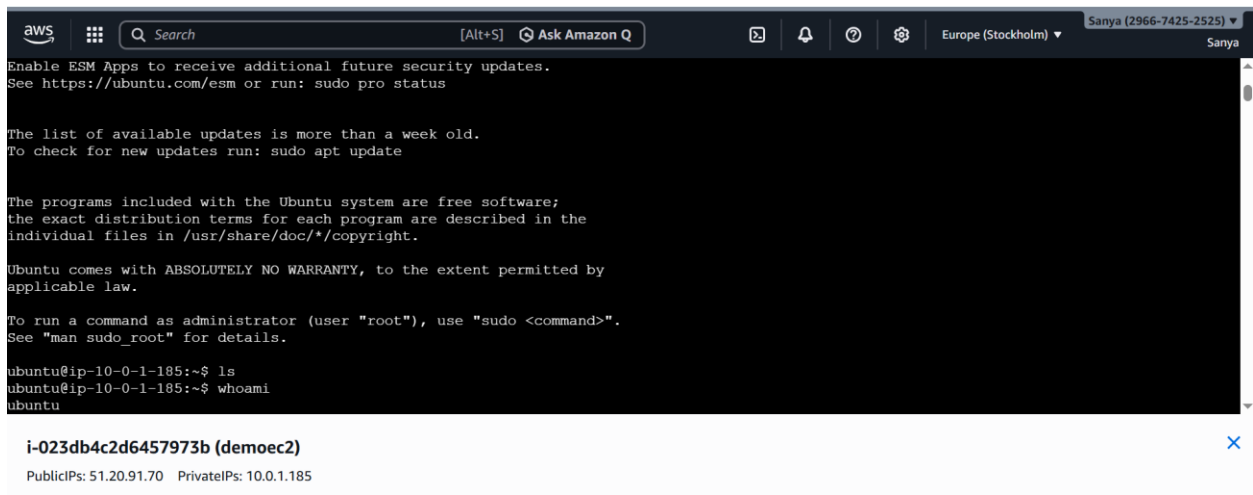

Name	Instance ID	Instance state	Instance type	Status check	Alarm status
myEC2	i-0e2c94f760e11f15a	Stopped	t3.micro	-	View alarms +
demoec2	i-023db4c2d6457973b	Running	t3.micro	3/3 checks passed	View alarms +

i-023db4c2d6457973b (demoec2)

Instance summary

Instance ID	Public IPv4 address	Private IPv4 addresses
i-023db4c2d6457973b	51.20.91.70 open address	10.0.1.185

SSH Terminal connected

The screenshot shows an SSH terminal session connected to the EC2 instance. The terminal displays the Ubuntu login screen with the prompt 'ubuntu@ip-10-0-1-185:~\$'. The user has run the 'ls' and 'whoami' commands, both returning 'ubuntu'. The terminal also shows the Ubuntu logo and the text 'Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by applicable law.'.

```
ubuntu@ip-10-0-1-185:~$ ls
ubuntu@ip-10-0-1-185:~$ whoami
ubuntu
```
